JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for directional solidification 701
– for in situ observation of crystallization 61
– for physical vapor transport rate 80

Biological aspects
– of antibody recognition 656

Cellular growth
– of lead–tin alloys 692
– of transparent alloys 701
Computer simulation
– of low supersaturation nucleation 426
– of melt growth 592
– of micro-pulling down process 552
– of oxygen doping in silicon 541
– of phase field model 712
– of thin crystal growth 679
Constitutional supercooling
– of barium borate 610
– of dilute binary alloys 271
– of lead–tin alloys 692
Convection 90, 133, 219, 552, 692, 701

Dendritic growth
– of liquid crystals 712
– of neodymium barium cuprate 61
– of ODS-alloys 413
– of sodium chloride 174
Device characterization
– electronic materials 9, 39, 491
– nanoparticles 335
– quantum wells 328
Diffusional control
– of cadmium selenide 516
– of germanium in silicon–germanium 328
– of solid growth 197
Dissolution of
– neodymium barium cuprate 61

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 16, 305, 510
– photolithographic 510

Heat flow control
– of numerical simulation 430
– of vapor growth system 426
Hydrodynamics, see Convection

Kinetics
– of growth 80, 90, 114, 156, 164, 182, 189, 305, 342, 374, 382, 430, 470, 510, 528, 535, 577, 610
– of nucleation 156, 257, 426, 510, 610, 641
– of particle engulfment 413
– of surface processes 451
– of thin film formation 133

Lasers, crystals for
– silver gallium selenide 597
– ultraviolet 364, 370

Melt growth technique
– by Bridgman–Stockbarger method
– – of lead barium niobate 347, 355
– – of silver gallium selenide 597
– – of succionitrile 701
– – of zinc selenide 39
– – theory of heat flow 430, 592
– by Czochralski method
– – of benzil 252
– – of gadolinium lanthanum vanadate 370
– – of germanium 720
– – of indium antimonide 443
– – of lithium tetraborate 364
– – of silicon 402, 541, 720
– by floating zone method
– – of fibrous yttrium iron garnet 446
– – of strontium calcium cuprate 55
– by induction cold crucible
– – of silicon 230
– by micro-pulling down method
– – of silicon germanium 552
– by uniaxial solidification
– – of α-aluminum oxide 123, 127
– – of binary alloys 271
– – theory of convection 271

0022-0248/98/$ – see front matter © 1998 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(98)00779-9

– by zone melting
– – of bismuth germanate 623
Microgravity, growth under
– of bismuth germanate 623
– of lead–tin alloys 692
– of mercuric iodide 80, 90
Morphological stability
– of binary alloys 271, 701
– of lead–tin alloys 692
– of protein crystals 665
– of silicon–germanium surfaces 720
– of spherulitic calcite 374, 382
– of strained crystals 257
– of titanium carbide whiskers 585

Nanoparticles, see Device characterization
Nucleation
– of cadmium telluride 426
– of neodymium barium cuprate 61
Numbers
– Grashof 430
– Marangoni 552
– Peclet 133

Phase diagram, of
– iron–nickel–sulphur 728
– neodymium barium cuprate 61
Precursor, for
– biological apatite 182
– magnesium selenide 572
– silicon carbide 335
Purification
– of pentlandite 728
– of succinonitrile 701

Quantum wells, see Device characterization

Solid growth
– by recrystallization
– – of tungsten sulphide 109
Solution growth
– by constant evaporation
– – of benzoyl amino acetic acid 674
– by flux method
– – of emeralds 648
– – of neodymium barium cuprate 61, 71
– – of potassium lithium niobate 615
– – of strontium calcium cuprate 55
– – of tungsten sulphide 109
– by low temperature method
– – of cadmium sulphide 114
– – of calcium spherulites 374, 382
– – of calcium sulphate dihydrate 156
– – of copper indium diselenide 114
– – of hydroxy apatite 182
– – of n-alcohol crystals 641
– – of octacalcium phosphate 182
– – of potassium acid phthalate 164
– – of potassium bichromate 389
– – of potassium dihydrogen phosphate 164
– – theory of growth kinetics 189
– by protein supersaturation
– – of subtilisin 665
Superlattices, multilayers
– of semi-magnetic II–VI compounds 572
Surface energy determination
– of n-paraffin 679
Surface structure, of
– cellular solid–liquid interface 701
– coarse crystal faces 389
– gallium arsenide 451
– gallium indium phosphide 1
– subtilisin 665

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of zinc sulphide selenide 33
– by liquid phase epitaxy
– – of gallium phosphide 148
– – of lithium niobate 605
– – of lithium niobate tantalate 605
– – of neodymium barium cuprate 71
– by metalorganic molecular beam epitaxy
– – of indium gallium phosphide 510
– – of indium phosphide islands 470
– – of silicon germanium 535
– – theory of growth kinetics 28
– by molecular beam epitaxy
– – of indium gallium aluminum arsenide 285
– – of zinc cadmium selenide 43
– – of zinc selenide 528
– – theory
– – – of cadmium telluride growth simulation 241
– – – of mole fraction and growth rate 43
– by vapor phase epitaxy
– – theory of growth 636
– – through chemical vapor deposition
– – – of silicon carbide 335
– – – of silicon germanium 328
– – – of titanium 322
– – through evaporation and condensation
– – – of gallium arsenide 451
– – – of silver on indium phosphide 496
– – through metalorganic chemical vapor deposition
– – – of aluminum arsenide 460
– – – of aluminum gallium arsenide 460
– – – of gallium arsenide 460, 501
– – – of gallium indium phosphide 1
– – – of gallium nitride 23, 127, 300, 478, 484, 491
– – – of indium gallium arsenide phosphide 293
– – – of indium phosphide 9, 16
– – – of indium phosphide antimonide 50
– – – of lithium aluminate 127
– – – of magnesium selenide 572

– – – of III–V compounds 305
– – – of zinc magnesium sulphide selenide 50
– – through pulsed laser deposition
– – – of cadmium selenide 516
– – through sputtering
– – – of zinc oxide 316

Vapor growth technique
– by chemical vapor deposition
– – of copper 133
– by evaporation and condensation
– – of α-hexathiophene 563
– – of α-quaterthiophene 563
– – of gallium arsenide 451
– – of mercuric iodide 80, 90
– – of organic films 732
– – of silicon carbide 101
– by plasma assisted chemical vapor deposition
– – of graphitic nanofibres 342
– by pulsed laser deposition
– – of cadmium selenide 516
– by sputtering
– – of zinc oxide 316
– theory of nucleation 426
Vapor–liquid–solid growth
– of pentlandite 728
– of titanium carbide whiskers 585
– of zinc selenide whiskers 528

Whiskers growth
– of titanium carbide 585
– of zinc selenide 528
